SPECIFICATION AMENDMENTS

P ease amend the paragraph at page 5, lines 3-11 (immediately after the chemical formula occupying lines 1-2) to read as follows:

where n=2-4; X is O, RCR¹; CR; C (n=4), CH (n=3), or CH₂ (n=2); NH; N; S; and R and/or R¹ is H, OH, a small alkyl group, such as CH₃ (such as CH₃), or (CH₂)_mNH₂ where m=1-6. Further included are bisphosphonic acids, which are also known as bisphosphonates, where X is preferably RCR¹, where R and R¹ groups are chosen independently from OH, H₂N(CH₂)₂, or CH₃. For example, RCR¹ can be H₂N(CH₂)₂C(OH) or CH₃COH. More specifically, the bisphosphonates include etidronic acid ((1-Hydroxyethylidene)bisphosphonic acid) and pamidronic acid ((3-Amino-1-hydroxypropylidene)bisphosphonic acid) where preferably n=2.
